

ALI RIZWAN TARIQ

Data Scientist and Full Stack Web Developer

+92 304 0003920 art.dev200@gmail.com linkedin.com/in/ali-rizwan-tariq Lahore, Pakistan

EXPERIENCE

Data Scientist & Full Stack Web Developer

FAMS by Falkenherz 06/2025 Dubai, UAE/Remote

- Engineered and deployed optimized Vision AI architectures (ViT, YOLO) on edge devices (NVIDIA Jetson, Raspberry Pi), achieving low-latency performance for real-time detection tasks.
- Built a comprehensive admin portal using NestJS, establishing a centralized system for real-time model monitoring, configuration, and lifecycle management.

Data Scientist & Full Stack Web Developer

Shufti 02/2023 - 06/2025 United Kingdom/Remote

- Engineered AI-driven security systems, developing behavioral anomaly detection models and adaptive authentication APIs (Zero Trust) to identify fraud and dynamically assess risk with high precision.
- Architected high-throughput data infrastructure, building real-time ingestion pipelines for low-latency threat detection while orchestrating robust API integrations to synchronize core systems.
- Developed scalable back-office ecosystems, designing user-centric administrative interfaces and interactive visualization dashboards that enhanced operational workflows and accelerated strategic decision-making.

Full Stack Developer

Programmers Force 11/2022 - 06/2025 Lahore, Pakistan

- Engineered scalable enterprise KYB and AML platforms, ensuring high-availability compliance verification within a fast-paced Agile environment.
- Unified frontend and backend architectures by designing optimized, cross-functional modules that reduced workflow complexity and elevated user experience.
- Translated complex regulatory requirements into technical specifications, aligning development roadmaps with strict compliance standards and market demands.

Full Stack Developer

Facia 11/2023 - 06/2024 Lahore, Pakistan

- Led frontend development of a biometric KYC suite, integrating liveness detection and age verification logic to satisfy regulatory requirements.
- Patched critical camera stream injection vulnerabilities, preventing media spoofing attacks and securing the verification pipeline against fraud.
- Leveraged offensive security expertise to audit internal architectures, identifying and resolving logic flaws and potential exploits prior to production.

EDUCATION

Bachelor of Science

University of Lahore 01/2022 - 12/2022 Lahore, Pakistan

SUMMARY

Software engineer specializing in full-stack web development and machine learning. Demonstrated success in creating scalable platforms and implementing intelligent automation solutions. Experienced in developing real-time detection systems that enhance operational efficiency.

KEY ACHIEVEMENTS

- AI Fraud Detection Success**
Achieved 98% precision in AI-driven fraud detection system at Shufti.
- Security Enhancement**
Reduced app vulnerabilities by 70% through proactive security measures at Facia.
- Data Infrastructure Optimization**
Increased data ingestion speed by 150% with new real-time pipelines at Shufti.
- Vision AI Deployment**
Implemented Vision AI models with 95% accuracy on edge devices at FAMS.

SKILLS

Machine Learning	Data Science	Python
JavaScript	RESTful APIs	
Data Preprocessing	Model Deployment	
Real-time Data Processing		
Behavioral Analytics	API Architecture	
Edge Computing	Selenium	
Frontend Development		
Backend Development	Problem Solving	
Team Leadership	Communication	
Collaboration	Adaptability	
Analytical Thinking
